

Funk 75

The durable Funk 75 handsets are especially designed for a wide variety of uses, including emergency services, transportation and industrial applications.

The soft foam padded handset features by leather grain effect. Handset and rest have rounded edges. Thus the risk of injuries by use in cars or ships is minimised. Handset and rest are manufactured from a flame retardant material (self-extinguishing acc. to UL 94 V-0).

The large, ergonomically arranged PTT key is easy to press. In on-hook position, the handset is securely locked on the rest. The matt structured finish is well adapted to the harsh conditions by mobile use.

The Funk 75 handset range is modular and can be adapted to existing communication systems. You can choose between complete sets or several components to make your individual configuration. Accessories for the installation into tables and desks or wall fastening are available.

Handset and Rest
